

## **BEEJAMRIT: A Natural Medicine for Seed Treatment**

Beejamrit is a traditional organic seed treatment widely used in natural and organic farming systems. It protects seeds from soil-borne and seed-borne diseases, improves germination, and enhances early seedling vigor.

### **What is Beejamrit?**

Beejamrit is a natural bio-inoculant prepared using indigenous cow dung, cow urine, lime, soil, and water. It is scientifically validated and recommended for organic seed treatment.

### **Beejamrit Composition**

- Indigenous cow dung
- Cow urine
- Cow milk
- Lime (calcium source)
- Healthy farm soil
- Water

### **Beejamrit Preparation (Verified Method)**

1. Take 20 liters of clean water.
2. Tie 5 kg fresh cow dung in a cloth and soak for 12 hours.
3. Dissolve 50 g lime in water and keep overnight.
4. Squeeze dung water and add 5 liters cow urine and 1 liter milk.
5. Add lime solution and 50 g soil while stirring.
6. Use within 24 hours.

### **Seed Treatment Method**

Soak seeds for 30 minutes, shade dry, and sow immediately.

### **Benefits of Beejamrit**

- Improves seed germination
- Protects from seed-borne diseases
- Enhances root development
- Eco-friendly and low cost

### **Conclusion**

Beejamrit is a powerful natural seed medicine supporting sustainable and organic agriculture.
